

CIS 195 Final Exam (Winter 2018)

GearFix

Key Features

- Main part of the web page is centered horizontally.
- Logo Hyperlink in header
- Nav menu using large block “buttons” that change adjust background position on hover. Text location and background image location similar to pictured sample. Skew/slant not necessary.
- Form position. Look for the form code provided. You don’t need to create the form, just copy/paste into your page. You need to position in the top-right corner of the header.
- Sidebar has H2 phone number with border.
- Sidbar has H3 header for hours and table displaying hours. Numbers are noticeably larger/bolder than other text.
- Sidebar has H3 header for Location with map display.
- 6 boxes are sized and arranged like the picture sample. Look at hint image to see the flexbox CSS used. Flexbox isn’t necessary, but using it was quite easy. Hint: 5px white borders were a nice way to go for “spacing”.
- 6 boxes use the same background image, but the background is sized and repositioned for each box to “reassemble” the image into one big one. Skier should be visible in the 4 boxes on the right, like the pictured sample.
- Footer uses the same basic logo from the header, but centered and sized very large.
- Overall, spaces are consistent and elements seem lined up, balanced, neat.

Create a working folder for all of your web page files. Don’t mix these with your other class files.

Find Starting files in Blackboard. In Exams. Password is **195march**.
